

Summary of Investors Behaviour & Investment Preference Analysis Report

Executive Summary :

The **Investors Behaviour & Investment Preference Analysis Report** provides a comprehensive analysis of investor behavior and preferences, utilizing dashboard insights to identify trends across various demographics, including age, gender, and investment avenues. The report aims to uncover patterns that can inform actionable strategies to enhance investor participation and engagement in the market

Key Investor Insights

- The report identifies a total of **40 investors**, with **37** of them being active, resulting in a **93% engagement rate**.
- Among these investors, **25** are male and **15** are female, indicating a higher male participation in investment activities.
- The average risk score of the investors is **3.48**, suggesting a moderate risk appetite.
- average score for mutual fund investments is **2.55**.

Age-wise Investment Behavior

- the majority of investors are in the **25-30 age group**.
- a notable decline in participation from those under **25 years**.
- Mid-career professionals demonstrate a stronger involvement in investments, highlighting a trend where age correlates with investment activity.

Preferred Investment Avenues

- Investors show a clear preference for **Mutual Funds**, which rank as the most favored investment option.
- Following this, **Equity investments** are the second most popular, while **Fixed Deposits** come in third.
- Interestingly, the **Public Provident Fund (PPF)** is the least preferred investment avenue among the surveyed group.

Gender-based Investment Patterns

- The report outlines distinct gender-based investment patterns, noting that male investors are more inclined to invest in **Equity** and **Mutual Funds**.
- whereas female investors tend to favor safer investment options.
- This indicates a significant variance in risk tolerance between genders Groups.

Investment Awareness & Source Impact

- A significant majority of the investors (37 out of 40) possess a high level of financial awareness, which correlates with their investment activity.
- The report highlights that **online platforms** and **internet sources** are the primary drivers of active investor engagement.
- while traditional advisory sources have a minimal impact on participation

Reasons for Mutual Fund Investment

- The primary motivation for investing in mutual funds is the expectation of **better returns**.
- followed by the benefits of **fund diversification**.
- Interestingly, tax-saving benefits are noted as a less influential factor in the decision-making process for mutual fund investments

Recommendations :

- To enhance investor engagement, the report suggests several targeted strategies:
- **Focus marketing efforts** on the **25-35 age group** to capture a demographic that shows significant investment potential.
- **Introduce financial literacy programs** aimed at increasing female participation in investment activities.
- **Strengthen digital marketing** initiatives through online platforms and social media to reach a broader audience.
- **Promote diversified and balanced mutual fund products** to cater to varying risk appetites.
- **Increase awareness campaigns** to engage low-participation segments and encourage broader investment involvement

Conclusion :

- The analysis concludes that there is a strong preference for market-linked investments, primarily driven by return-oriented investors.
- The role of digital awareness and education is emphasized as critical in fostering investment participation.
- By implementing targeted strategies, the report suggests that investor engagement and diversification can be significantly improved, ultimately leading to a more robust investment landscape
