

Investors Behaviour & Investment Preference Analysis Report

Executive Summary

- The report analyzes investor behavior and investment preferences using dashboard insights.
- It highlights trends across age, gender, investment avenues, awareness, and reasons for investing.
- The objective is to identify patterns and recommend actionable strategies to improve participation.

Key Investor Insights

- Total Investors: 40, with 37 active investors indicating a 93% engagement rate.
- Male investors (25) outnumber female investors (15).
- Average risk score of 3.48 reflects a moderate risk appetite.
- Average mutual fund investment score stands at 2.55.

Age-wise Investment Behavior

- Majority of investors fall within the 25–30 age group.
- Lower participation is observed among investors below 25 years.
- Mid-career professionals show stronger investment involvement.

Preferred Investment Avenues

- Mutual Funds are the most preferred investment option.
- Equity investments rank second, followed by Fixed Deposits.
- Public Provident Fund (PPF) shows the lowest preference.

Gender-based Investment Patterns

- Male investors tend to invest more in Equity and Mutual Funds.
- Female investors show higher inclination toward safer investment options.
- Risk tolerance varies significantly across gender groups.

Investment Awareness & Source Impact

- Investors with financial awareness dominate the dataset (37 out of 40).
- Online platforms and internet sources generate the highest number of active investors.
- Traditional advisory sources contribute minimally.

Reasons for Mutual Fund Investment

- Better returns are the primary motivation for investing in mutual funds.
- Fund diversification is the second most important reason.
- Tax-saving benefits are a less influential factor.

Recommendations

- Focus marketing and product strategies on the 25–35 age group.
- Introduce financial literacy programs to increase female investor participation.
- Strengthen digital marketing through online platforms and social media.
- Promote diversified and balanced mutual fund products.
- Increase awareness campaigns to improve participation from low-engagement segments.

Conclusion

- The analysis reveals a strong preference for market-linked investments driven by return-oriented investors.
- Digital awareness and education play a critical role in investment participation.
- Targeted strategies can further enhance investor engagement and diversification.
